1. EXECUTIVE SUMMARY

Vorsorge is a web-based reward platform built around guided participation. Members do not simply click through disconnected offers. Instead, they move through a controlled task environment where questions, guided knowledge cues, and answer validation steps are part of the same experience. The objective is to create a platform that feels more transparent than a random task board because activity, corrections, and recorded outcomes are connected inside one dashboard.

2. PLATFORM VISION

The central idea behind Vorsorge is straightforward: users should be able to learn while earning. Each completed task is designed to contribute to both knowledge improvement and visible account progress.

When a member selects the wrong answer, the system is intended to keep guiding the session until the correct path is completed. This gives the platform an instructional layer while preserving the reward objective. Because progress is shown on the dashboard, members receive a clearer record of what was completed, what was recorded, and how ongoing participation is building over time.

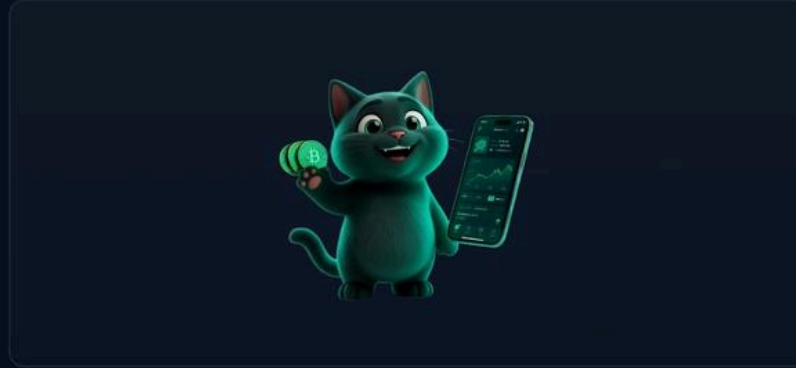

3. HOW THE REWARD SYSTEM WORKS

The reward model is based on guided completion rather than unverified participation. A standard session follows this precise 7-step process:

1. **Account setup:** Creation and secure sign-in to the member area.
2. **Task selection:** Selection of available questions or combo task activity from the dashboard.
3. **Guided interaction:** Submission of answers through the structured task interface.
4. **Correction alignment:** Following the system correction flow if a wrong option is chosen.
5. **System verification:** Validation of the completed answer path by the platform.
6. **Point allocation:** Automatic recording of points and visible history updates on the dashboard.
7. **Progression:** Placing a withdrawal request or advancing into a higher plan when eligible.

4. Dashboard and Member Control

The dashboard acts as the operating center of the platform. It gives members a unified place to view available activities, track recorded points, review progress, check plan status, follow account history, and monitor requests.
